

After cutting out the dial plates fold on the dashed line.  
 Glue the two halves together. Be sure to glue the tab of the base plate between the two dial plates.  
 Carefully cut out the centre 1/2" circle for the dowel. A 1/2" diameter dowel **must** be used for the gnomon.

The gnomon **must** be made from a piece of wood (or other material) dowel the same diameter as the centre hole for the sundial to work properly.

Print all pages at the same scale. Full scale is best. Do not use "Fit to Page".

Please read the instructions provided with the full scale plans for the equatorial sundial for more information.
